About us

Capital Area Research (CARE) has been conducting clinical research trials in Central PA since 1998.

We strive to provide a wide variety of opportunities to our patients to participate in the latest cutting edge research trials within our community. These trials allow patients to have access to the latest drugs and cardiac devices three to five years before they are released in market.

We at CARE are committed to providing our patients with the best research experience and access to the latest medicines.

What do we do?

Capital Area Research conducts patient-oriented national and international clinical research studies. The contribution of our physicians, study coordinators and most importantly our patients have helped to advance medical knowledge and drug development, thus improving the health care globally.

How do we do it?

Without our patients who volunteer to participate in our research studies, advancement of drugs and devices would not be possible. It is our foremost responsibility to ensure the safety and wellbeing of our trial participants while taking an investigational medicine. Patients are closely monitored by our physicians and study staff throughout the duration of the trial. Controls are in place to safeguard patient's safety, privacy, and their personal information.

As a study participant you may undergo testing, and receive medicine or devices at no cost to you as well as financial reimbursement for your time and dedication.

Each FDA approved research study is sponsored by a pharmaceutical company which oversees the study conduct along with the Food and Drug Administration (FDA) and an Institutional Review Board (IRB) to ensure that the patients' rights are protected and risks are minimized.

Current Studies

Our current studies are focused on the following medical conditions:

- Atrial Fibrillation
- Chest pain
- Heart attack
- Defibrillator
- Blood clots
- Diabetes
- High Cholesterol
- Congestive Heart Failure
- Hypertension
- Ventricular Tachycardia

Requirements are different for each study. Please contact us if you are interested in participating in any of our trials. If you do not qualify for any of our current studies, we will keep your information and contact you when future studies become available
